

1. Solve the following DE:

a)  $x \frac{dy}{dx} - y = \sqrt{9x^2 + y^2}; x > 0$

b)  $\frac{dy}{dx} = \frac{x\sqrt{x^2 + y^2} + y^2}{xy}; x > 0$

c)  $\frac{dy}{dx} + 2x^{-1}y = 6\sqrt{1+x^2}\sqrt{y}; \quad x > 0$

d)  $\frac{dy}{dx} = \cos^2(3x+3y-1)$

$$\text{e)} \quad \frac{dy}{dx} + \frac{2x}{1+x^2} y = xy^2; \quad y(0) = 1$$

$$\text{f)} \quad \frac{dy}{dx} = \frac{x+2y-1}{2x-y+3}$$
